ABSTRACT OF THE DISCLOSURE

A communication terminal device and a facsimile device, and a method of controlling the communication terminal device and the facsimile device. The invention provides the communication terminal device capable of concentratedly controlling the information relating to the receipt rejection. The invention is featured in that the above devices are provided with a receipt-rejected communication control medium for collecting the communication control information in connection with the communication relating to the signal arrival from the communication partner not registered in the receipt-allowed communication partner registering table, and storing the collected communication control information in the receipt-rejected communication control information storing medium; a communication control list creating medium for creating the list image information based on the communication control information stored in the above-mentioned receipt-rejected communication control information storing medium; and a list outputting medium for visibly outputting the list image information created by the communication control list creating medium.
